## New Service Announcement: New Air / Water / Structural Capabilities – Middleton, WI

*In December of 2013, Intertek acquired Architectural Testing, Inc. resulting in an expanded scope of service offerings in the building products market. With the recent addition of PSI, Inc. and MT Group to the Intertek family, once again, we have been able to further extend Intertek's breadth of capabilities allowing us the opportunity to offer a more complete solution to our customers. As the most comprehensive provider of assurance, testing, inspection, and certification solutions in the building & construction industry, we look forward to partnering with you on your next project.*

Intertek is pleased to announce the expanded scope of accreditation at our lab in Middleton, Wisconsin. An additional 13,500 square feet of indoor space has been added to the lab to accommodate a Lexan Flat Wall (26' wide x 13' tall) and Steel Mock-Up Wall (44' wide x 16' tall), which were previously located at our lab in Wausau, Wisconsin. The Middleton lab is now home to equipment capable of testing of air, water, and structural standards, including structural control panels, a hurricane and tornado missile impact cannon, a dynamic wind machine (aka "the WOLF"), and thermal (Tenney) and high pressure (BABS II) cycling equipment. The personnel from our Wausau facility have the technical expertise and testing experience to guide complex construction projects through completion.

"The additional space and expanded scope of services now available in Middleton allows us to bring a more comprehensive suite of services to the growing building and construction market," says Brian Brunson, Operations Manager for the Middleton lab. "The indoor mock-up capability is unique to the area allowing us to serve customers with pre-construction air, water, and structural testing options to ensure success during the final commissioning process. We have broadened our product testing capabilities to include curtain walls, store fronts, louvers, and garage door products, just to name a few. The extra space gives us the opportunity to meet the needs of larger scale roofing and solar projects previously lacking in the Midwest region."

*Late last year, Intertek transferred its Wausau capabilities to Middleton, Wisconsin, located just outside of Madison. This move means greater access to more capabilities in one location.*

*Testing capabilities in Middleton now include:*  
 Air / Water / Structural – AAMA & ASTM  
 Garage Doors – DASMA  
 Miami-Dade – ASTM & TAS  
 Tornado – FEMA & ICC  
 Rain Screen – AAMA & ASTM  
 Louvers – AMCA & TAS  
 Mock-Up – AAMA & ASTM

### Certification

Participation in one of Intertek's Certification Programs is proof of your commitment to safety and quality. Through initial testing of your product or system and ongoing factory inspections, you can provide customers, Authorities Having Jurisdiction (AHJs), and project leaders with confidence that you have met all applicable regulatory testing requirements. Earn the right to bear the ETL or Warnock Hersey Mark and differentiate your product!

For more information or to schedule a test, please visit our website at [www.intertek.com/building](http://www.intertek.com/building) or call to speak with one of our staff at **800.WORLD.LAB (800.967.5352)**.
