New Service Announcement: Reducing Your Time to Market – York, PA

In December of 2013, Intertek acquired Architectural Testing, Inc. resulting in an expanded scope of service offerings in the building products market. With the recent addition of PSI, Inc. and MT Group to the Intertek family, once again, we have been able to further extend Intertek's breadth of capabilities allowing us the opportunity to offer a more complete solution to our customers. As the most comprehensive provider of assurance, testing, inspection, and certification solutions in the building & construction industry, we look forward to partnering with you on your next project.

Intertek is pleased to announce increased capacity for roof testing at our laboratory in York, Pennsylvania. The York facility has more than doubled the amount of space dedicated to roof testing services. The expansion allows for 7 additional 12' x 24' CSA123 test frames resulting in the possibility to build and test a total of 10 12' x 24' specimens. There is now sufficient indoor space to build, condition in place, and test without moving TEN 12'x 24' specimens or SEVEN 10' x 10' specimens thereby providing the best opportunity for the test results to accurately represent the optimum performance of your roofing products. We have also implemented modifications to our dynamic wind test equipment to enable testing to ASTM D3161 and D7158, wind-resistance for steep slope and asphalt shingle roofs respectively, to be performed in the conditioned space of the expanded facility.

“By dedicating additional space to roof testing and increasing the number of frames we have available for assemblies, we are better equipped to handle higher volumes and meet our customers required capacity,” Scott Warner, Vice President - Operations. “With the capability to conduct testing to all major wind uplift and static and dynamic wind testing requirements, this expansion was necessary to ensure we are able to continue to deliver results quickly and efficiently so our customers have a streamlined path to market.”

The York, PA facility is the most comprehensive building products lab in North America. With additional service offerings ranging from acoustical and material performance to thermal and fire testing, this location is the complete solution for all your roof testing needs. 40 years of expertise in the building products testing and certification industry coupled with state-of-the-art test equipment, allows for faster speed to market and cost effective access to both domestic and international markets.

Intertek

Intertek's ETL mark is the fastest growing safety certification in North America and is featured on millions of products as proof of product compliance to North American safety standards. Authorities Having Jurisdiction (AHJs) and code officials across the US and Canada accept the ETL Listed Mark as an indication of manufacturers' commitment to safety. Retail buyers accept it on products they're sourcing, and every day, more and more consumers recognize it on products they purchase as a symbol of safety and quality.
